

easyCard Starter Set

In the easyCard system, the ident media are taught and deleted with the help of a programming card.

In the simple variant, the user only needs the programming card in addition to the ident media. The teaching of an ident medium is carried out by holding the programming card in front of the cylinder, fitting, or reader and subsequently holding the user ident medium in front of it. Up to 200 ident media can be administrated this way.

With the „easyCard“ starter set, you acquire the optimal opportunity for entering into the electronic access solutions of WILKA.

The advantages

- Attractive introductory price
