**MODE OF OPERATION E**  
TRANSMISSION FUNCTION

**Application**

Suitable for door systems, where unauthorized external access must be prevented thus maintaining security. Access to the outside can always be obtained; emergency exit is not compromised even when the door is locked (emergency exit operation).

**Internal aspect (emergency exit side)**

The internal side of the door (emergency exit side) is equipped with a lever or push bar/touch bar. The locked bolt will be retracted simultaneously with the latch via the lever or touch bar/push bar in an emergency situation. In the unlocked mode the latch can be retracted by means of the lever, push bar/touch bar or key. The lock can be locked and unlocked by means of a key.

**External aspect**

The external side of the door is equipped with a fixed door knob. In the unlocked mode the latch can be retracted by means of the key. The lock can be locked and unlocked by means of a key.
